96.4% of job postings specified an occupation

Caesar's Entertainment posted 290 Ads

Top Employers

67.2% of job postings specified an employer

Limitations

- Jobs requiring low skills/low wages tend to use alternative methods of attracting job seekers and are under-represented in online ads.
- Internal company hiring and union hiring are often not captured by online ads.
- Online job posting volume does not necessarily correlate with the level of job openings or hiring.
- The percentage of job postings that specify a certification is small, limiting how representative the data is.
- Algorithmic ad parsing can lead to miscoding occupations and skills due to similarities between abbreviations and other letter combinations, etc.
- In online job postings Burning Glass reports licenses and certifications together.
- The mean salary data in job postings reflects the salary listed by employers in job postings, adjusted to be equivalent to a full-time, annual wage. If a salary range is specified, the median of the range used.
- High ad volume often occurs for occupations/industries that are having difficulty finding qualified candidates, high turnover positions/recurring openings, or when companies are building large candidate pools.
- Online job postings should only be used with caution when developing/analyzing time series trends due to the constant changes in the rate of online advertising usage and in the methods used for collecting the data.
