

Job Growth by Establishment Size In Nevada

January 7, 2014

Susanna Powers, Economist

Nevada Job Growth by Establishment Size (year-over-year)

- In the Quarterly Census of Employment and Wages program, the Research and Analysis Bureau collects and compiles employment and wage data using the unemployment insurance administrative files from the employers' quarterly contribution reports. In addition, the employers' quarterly report provides employment and worksite statistics by business size classification.
- The bar chart shows employment changes across all private employment size classes in the second quarter of this year relative to a year ago.
- Results show the private sector is creating jobs, with the exception of the establishments with 500-999 workers, where job readings fell 800 relative to the second quarter of 2012.
- Firms in the 50-99 employee size class increased employment the most on a year ago basis, adding 7,300 jobs. Small firms with 20-49 workers added 6,300 jobs.
- Those establishments with no more than four employees added 1,200 jobs over the year.
- Nevada's largest businesses, those with at least 1000 jobs, had 2,400 more workers relative to the same quarter in 2012.
