2015 YTD Job Growth by Industry: Part I
Marianne Segurson, Economist

Note: 2015:41
June 17, 2015

Leisure/Hospitality, T/T/U, Healthcare, and Construction Lead the Way in Job Gains

YTD Job Growth by Industry (year-over-year)

- Non-Farm job levels are up 39,300 relative to a year ago through the first five months of 2015.
- Recent job gains in Nevada have been widespread. In fact, of the ten major industry groups tracked in the State, only mining has seen jobs fall so far this year (-500 during the first five months of the year vs. the same period in 2014).
- Jobs in financial activities have held steady over the same period. Everywhere else, payrolls are up.
- Leisure/hospitality job levels have increased 15,600 during this year's first five months.
- Trade/transportation/utilities employment is up 7,800.
- Nevada's construction sector lost about two-thirds of its jobs during the recession. However, it turned the corner and has been adding jobs of late. So far this year, construction employment is up by 4,600 in the Silver State.
